How to keep ads from delivering spyware: good, better, best.

Citizen Lab traced Candiru spyware on Al Jazeera devices back to targeted ads.

Per the report, a device could be infected **the moment the ad rendered.**

All three levels come from the report's own recommendations.

Which level is your team at? Save this.

- Good: an ad blocker in every browser. Easy, but apps still show ads.
- Better: turn off the mobile ad ID, via MDM at work. Ads still load, less targeted.
- Best: a DNS filter on the router, like Pi-hole or NextDNS. Misses phones off that network.
